PROFESSIONAL SUMMARY

Cloud, DevOps, and Full Stack Engineer with hands-on experience across AWS, Terraform, Docker, and Infrastructure as Code gained through Site Reliability Engineering and Cloud/DevOps internships. I enjoy building technology that solves real problems, whether that's automating infrastructure, improving cloud platforms, or contributing to full-stack applications. Driven to build systems that are reliable, scalable, and genuinely useful while continuing to grow across every layer of the software stack.

TECHNICAL SKILLS

Cloud & Platforms

AWS (Amazon Cognito, IAM Identity Center, Amazon Connect, ECS, Fargate, RDS PostgreSQL, Amazon S3, CloudFront, Route 53, Amazon WorkMail), Docker, Kubernetes, Minikube, DigitalOcean

Backend Development

Node.js, NestJS, Express.js, TypeScript, JavaScript (ES6+), REST APIs, OAuth 2.0, JWT Authentication, Prisma ORM

Developer Tools

Postman, Visual Studio Code, Jira, Confluence

Infrastructure & DevOps

Terraform, Ansible, Bash Scripting, GitHub Actions, CI/CD, Git, GitHub, Linux, Nginx

Frontend Development

React, HTML5, CSS3, Bootstrap

Databases

PostgreSQL, MySQL, MongoDB

PROFESSIONAL EXPERIENCE

SuppliFlex | Remote Feb 2026 – Jun 2026

Cloud / DevOps & Software Engineering Intern

- Developed Terraform Infrastructure as Code (IaC) for an Amazon Connect deployment, authoring the initial module scaffold, remote-state configuration, and deployment automation while reviewing and validating production infrastructure changes.
- Configured and validated AWS services including Amazon Cognito, IAM Identity Center, Amazon WorkMail, Amazon S3, CloudFront, and Route 53 to support authentication, identity management, and production cloud deployments.
- Diagnosed authentication and integration issues across AWS Cognito and OAuth 2.0 providers (Shopify, QuickBooks, Zoho, and Xero), identifying root causes and validating production fixes that restored pilot onboarding workflows.
- Supported Amazon SP-API integration efforts by investigating OAuth 2.0, application registration, and IAM configuration issues, documenting findings and recommended remediation to enable pilot deployment.
- Directed backend feature implementation using NestJS, TypeScript, and React, reviewing implementation, validating functionality, and coordinating feature delivery against engineering requirements.
- Led end-to-end staging validation across onboarding, authentication, inventory management, and third-party integration workflows, collaborating with engineering to validate fixes, document issues in Jira, and support MVP release readiness.
- Authored engineering documentation including Functional Requirements Documents (FRDs), MVP Product Requirements Documents (PRDs), validation plans, and technical handoff documentation to support Product, Engineering, and Design teams.

Addteq | Remote Apr 2025 – Aug 2025

Site Reliability Engineering Intern

- Automated infrastructure provisioning across DEV, QA, and PROD environments using Terraform and Ansible, enabling consistent, repeatable deployments and infrastructure configuration.
- Engineered an automated disaster recovery solution reducing environment restore time from hours to minutes through idempotent Ansible automation and one-command recovery workflows.
- Deployed and administered a DigitalOcean Managed MySQL cluster with replication, automated backups, and infrastructure monitoring for database health, CPU, memory, disk utilization, and SSL certificate status.
- Automated SSL certificate lifecycle management using acme.sh with DNS-01 validation, implementing Apache virtual host configuration and UFW firewall automation to strengthen production security.
- Built monitoring and alerting solutions for infrastructure and application health, proactively identifying and resolving web server, SSL, firewall, and load balancer configuration failures.
- Used Docker to provision isolated Confluence environments for plugin compatibility testing, accelerating validation while protecting production systems from configuration risk.
- Created deployment runbooks, disaster recovery procedures, infrastructure documentation, and operational guides in Confluence to improve deployment consistency and knowledge sharing across engineering teams.

TECHNICAL PROJECTS

TipTrack – Full Stack MERN Application

React, Node.js, Express.js, MongoDB, Docker, Kubernetes (Minikube), Nginx, JWT

- Built a full-stack MERN application with React, Express.js, and MongoDB, implementing JWT authentication and role-based access control.
- Containerized the application using Docker and deployed it locally with Kubernetes (Minikube), configuring ConfigMaps, Secrets, Persistent Volume Claims (PVCs), and liveness/readiness probes.
- Designed a three-tier application architecture while gaining hands-on experience with Kubernetes networking, container orchestration, and cloud-native application deployment.

EDUCATION

Software Engineering Certificate — University of Texas at Arlington | 2024

QuickStart Coding Boot Camp

Completed 500+ hours of training (JavaScript, React, Node.js, Express.js, MySQL, MongoDB, REST APIs, Git/GitHub, CI/CD, Agile/Scrum), building full-stack apps with authentication.

B.A., Advertising & Marketing Comm. — Columbia College Chicago | 2012

CERTIFICATIONS

AWS Certified Solutions Architect – Associate (SAA-C03) | 2026

Certified ScrumMaster® (CSM) – Scrum Alliance | 2023

Docker Fundamentals – SimpliLearn | 2024

Confluence Fundamentals – Atlassian | 2024

Jira Fundamentals – Coursera | 2023
